

Exton, PA 19341

Prepared June 2026

Water provider: Aqua Pennsylvania (West Chester system).

Here is what public testing shows about the tap water in Exton (19341). The figures come from the EWG Tap Water Database and the utility's 2024 water quality report. Legal limits and health guidelines are two different things: water can meet every legal limit and still carry levels that independent scientists flag as a concern. None of the readings below are illegal; several are well above the health-based guidelines set by the Environmental Working Group.

What public testing shows

● PFAS treatment underway nearby	Robert Dean wells, West Whiteland	Aqua is building PFAS treatment at local wells after detections, funded in 2025. PFAS removal is an active local project, not a hypothetical.
● Disinfection byproducts (TTHMs, HAAs)	39 ppb TTHM, 47 ppb HAA9	Legal (limits 80 and 60 ppb) but far above EWG's health guideline. They form when chlorine meets organic matter.
● PFOA 'forever chemical'	3.28 ppt	Just under the new 4 ppt federal limit across the West Chester system. Hard to remove without a dedicated system.
● Hard water	Regionally hard	Chester County water is classified hard to very hard. It scales fixtures, shortens appliance life, and spots glassware.
● Nitrate	4.12 ppm	Below the 10 ppm legal limit. Common where there is farming and groundwater, worth watching for infants.

PFAS is being treated. Don't wait on it.

Treatment at the local wells is years out. A whole-home or point-of-use system handles it now. We'll call you to go over your results and what your home actually needs.
