

Malvern, PA 19355

Prepared June 2026

Water provider: Aqua Pennsylvania (West Chester system). Many homes in the surrounding townships are on private wells.

Here is what public testing shows about the tap water in Malvern (19355). The figures come from the EWG Tap Water Database and the utility's 2024 water quality report. Legal limits and health guidelines are two different things: water can meet every legal limit and still carry levels that independent scientists flag as a concern. None of the readings below are illegal; several are well above the health-based guidelines set by the Environmental Working Group.

What public testing shows

● Hard water	Regionally hard	Chester County water is classified hard to very hard. It scales fixtures and appliances and leaves spots on glass and dishes.
● Disinfection byproducts (TTHMs, HAAs)	39 ppb TTHM, 47 ppb HAA9	Among the higher readings in the area. Legal (limits 80 and 60 ppb) but far above EWG's health guideline.
● PFOA 'forever chemical'	3.28 ppt	Just under the new 4 ppt federal limit. PFAS is a documented concern across Chester County water systems.
● Nitrate	4.12 ppm	Below the 10 ppm legal limit. Common in areas with farming and wells, and worth watching for households with infants.
● On a private well?	Unregulated, untested	Private wells are not tested by anyone but the owner. If you are on a well, your water has likely never been checked.

On a well, or just want a straight answer?

System averages don't tell you what's coming out of your tap, and a private well tells you nothing at all. We'll call you to go over your results and what your home actually needs.
